

Halcyon Brand Guidelines

Visual Identity & Design Standards

Edition: 2026

Introduction

Our identity at a glance

Halcyon Solutions is an AI-powered data intelligence platform serving the financial services and fintech space. Our product suite — TrueTax, TrueCalc, TrueMark, TrueYou, TrueOccupancy, and TrueReport — helps lenders, banks, and fintechs make better decisions faster, with greater confidence and less fraud exposure.

These guidelines govern every visual expression of the Halcyon brand. From the teal gradient that anchors our marketing materials to the amber accent that flags a problem statement, every design choice is intentional. Consistency is trust. Trust is the product.

"Decide with certainty." — Every visual and verbal decision should be filtered through this lens. Does it feel clear, credible, and authoritative? Does it reinforce the confidence we give our clients?

Logo

Variants, clear space & usage rules

Logo Variants

The Halcyon logo comprises two elements: the symbol mark (a stylized bird/helix form rendered in a teal-to-blue gradient) and the wordmark "HALCYON" in bold sans-serif. In header and co-brand contexts the logo appears without the tagline. The tagline "Decide with certainty" appears as a standalone lockup beneath the wordmark when space permits — typically on title slides, covers, and large-format applications.

Clear Space & Sizing

Always maintain a minimum clear space equal to the cap-height of the "H" in HALCYON on all four sides. No type, imagery, or graphic elements may intrude on this zone.

Minimum reproduction size: 1.5" / 108px wide for the full logo.
Symbol mark alone: 0.5" / 36px. Below these thresholds the logo loses legibility — use the symbol mark only at small sizes.

Logo Do's & Don'ts

✓ DO	✗ DON'T
Use the full-color version on white or very light backgrounds	Place the full-color logo directly on the teal gradient background
Use the white reversed version on teal gradient or navy backgrounds	Recolor, outline, drop shadow, or add any effects to the logo
Maintain required clear space on all sides at all times	Crowd the logo with competing text or graphic elements
Scale proportionally — preserve the symbol-to-wordmark ratio	Stretch, skew, rotate, or clip any part of the logo
Source files only — always use the approved PNG or vector master	Recreate or typeset the logo in any application

Color Palette

Primary gradient, accent & supporting colors

Primary Brand Gradient

The Halcyon gradient is the most recognizable element of our visual identity. It appears on hero banners, footer bars, background watermark assets, and the symbol mark itself. It flows left-to-right from Teal Green to Teal Blue. Always apply it in this direction — never reversed, never vertically in standard marketing materials.

	
Teal Green (Gradient Start)	Teal Blue (Gradient End)
#0AB7A3	#0498C6
RGB 10, 183, 163	RGB 4, 152, 198
Primary gradient: #0AB7A3 → #0498C6, left-to-right. Used for hero banners, footer bars, and the background watermark asset.	

Supporting Teal Shades

These tonal variants are used for tinted backgrounds, section accents, hover states, and depth within teal-dominant layouts. Do not substitute these for the primary gradient endpoints in hero applications.

Teal Mid	Teal Dark	Footer Teal	Link Teal
#02AF9B	#015E7A	#079FAD	#0292BE
RGB 2, 175, 155	RGB 1, 94, 122	RGB 7, 159, 173	RGB 2, 146, 190
Section accents, icon fills	Deep teal — text on light bg	Footer bar, horizontal rules	Hyperlinks, CTA text

Navy & Blue Family

Deep Navy is the primary dark background and text color for formal documents, decks on white, and quote block overlays. The mid-blues support data visualization, table headers, and secondary UI fills. These colors anchor the brand in authority and trustworthiness alongside the teal gradient.

Deep Navy	Quote Blue	Mid Blue	Link Blue
#142D55	#3E6BA4	#1E4380	#3374DD
RGB 20, 45, 85	RGB 62, 107, 164	RGB 30, 67, 128	RGB 51, 116, 221
Dark backgrounds, headlines	Quote block overlay	Table headers, panels	Digital accents, chart fills

Accent: Amber Gold

Amber is the brand's selective accent color. In product collateral it marks "The Problem" — the pain point the product solves. In broader brand usage it adds warmth against teal dominance and signals attention or priority. It should never be used as a dominant color and should never compete with the teal gradient.

Amber Gold

#EDA436

RGB 237, 164, 54

Problem callouts, accent pill headers

Amber Dark

#C3872D

RGB 195, 135, 45

Amber hover, card border accents

Color hierarchy: Teal gradient is always primary. Navy provides depth and authority. Amber is accent-only — never dominant. In any composition, teal should have the largest visual mass.

Color Usage by Application

Hero banners	Teal gradient (#0AB7A3 → #0498C6), left-to-right. White headline text. White reversed logo.
Footer bars	Same teal gradient. White icon and contact text.
Background watermark	Symbol mark ghosted at low opacity over teal gradient fill.
Content area background	White (#FFFFFF). Content cards use white with amber/gold border or subtle shadow.
Comparison table bg	Light gray (#F2F2F2) for alternating rows. Amber pill for the "Manual/Legacy" column header. Teal pill for the product column header.
Quote blocks	Navy-to-blue overlay (#3E6BA4 range) with white italic text. Semi-transparent over a photographic background.
Subheadings (Problem)	Amber Gold (#EDA436) — always paired with "The Problem" context.
Subheadings (Solution)	Teal Green (#0AB7A3) — always paired with "The Solution" context.
Body text	Near-black (#1C1C1E) on white backgrounds.
Hyperlinks / CTA email	Link Teal (#0292BE), underlined.

Typography

Typeface, hierarchy & application

Primary Typeface: Century Gothic

Century Gothic is Halcyon's primary typeface across all brand touchpoints. Its geometric, circular letterforms project modernity and precision — qualities that align directly with the technology and data intelligence positioning of the brand. Century Gothic is included with Microsoft Office and widely available across platforms, ensuring consistency across all internal and client-facing documents.

Style	Specification	Example
Display / H1	Century Gothic Bold, 36–48pt	Decide with certainty.
Hero Headline	Century Gothic Bold, 28–36pt	Decide with certainty.
Section Heading / H2	Century Gothic Bold, 24pt	Decide with certainty.
Subheading	Century Gothic Bold, 14–16pt	Decide with certainty.
Body Copy	Century Gothic Regular, 10–11pt	Decide with certainty.
Caption / Label	Century Gothic Regular, 8–9pt	Decide with certainty.

Hero Headline Treatment

The large hero headline on product one-pagers and marketing materials uses Century Gothic Bold in white, set at 28–36pt, against the teal gradient background. Sentence case is used — not title case or all caps. Headlines should be direct, problem-aware, and action-oriented, consistent with the voice guidelines in Section 5.

Product one-pager headline formula: [Action verb] + [Outcome] + [Context]. Example: "Automate Self-Employed Income Calculations and Eliminate Manual Work." Avoid abstract claims — be specific about what the product does.

Typography Do's & Don'ts

✓ DO	✗ DON'T
Use Century Gothic across all standard materials	Mix Century Gothic with other sans-serif typefaces
Use Bold for all headings and subheadings	Use ALL CAPS for body copy or paragraph text
Use sentence case for hero headlines (not ALL CAPS)	Set body text larger than 11pt in print documents
Maintain clear hierarchy: hero → section → subhead → body	Use light/thin weight at small sizes — minimum Regular
Ensure adequate line spacing (130–145% for body copy)	Use Century Gothic for purely decorative display at very large sizes without brand approval

Brand Voice & Tone

How Halcyon communicates

Authoritative	We lead with evidence. We state what the product does and what it prevents. No hedging when the outcome is clear.
Problem-first	We name the pain before we offer the solution. Every product story starts with what's broken, then shows how we fix it.
Specific	We use real numbers, real job titles, real scenarios. "80% faster" beats "significantly faster." "VP Underwriting" beats "a customer."
Trustworthy	Understated confidence. We do not use hyperbole or marketing superlatives. Our evidence speaks for itself.
Operationally aware	We speak the language of underwriters, loan officers, compliance teams, and commercial bankers — not generic tech marketing language.

"Decide with certainty" is the editorial filter for every word. If a sentence introduces ambiguity, hedges a claim without evidence, or uses vague tech language, revise it.

Product Collateral Layout

One-pager structure & design system

Standard One-Pager Structure

All Halcyon product one-pagers follow a consistent layout system. This creates a predictable reading experience for prospects receiving multiple one-pagers across the product suite.

Navigation bar (top)	White background. Full product suite listed in Century Gothic Regular. Active product is bold/darker. Halcyon logo right-aligned.
Product header	White background. Product logo + name (left), vertical divider, vertical market label (center), Halcyon logo (right).
Hero banner	Teal gradient (#0AB7A3 → #0498C6). Large white Century Gothic Bold headline (sentence case). Ghosted iconography at right edge.
Content card	White background with rounded corners and subtle amber/gold border. Two-column layout: "The Problem" (left) and "The Solution" (right).
Comparison table	Inside content card. "Manual / Legacy" column (amber pill header, X red bullets) vs product column (teal pill header, ✓ teal checkmarks). Light gray alternating row fill.
Bridge paragraph	White background, body copy, centered. One to two sentences connecting problem/solution to the CTA.
Quote block	Dark blue-teal overlay with white italic testimonial text. Attribution in italic below, right-aligned.

CTA strip	White background, centered. Bold closing statement + contact line + teal hyperlinked email address.
Footer bar	Teal gradient. White website, email, and phone icons + contact details.

Comparison Table Color Rules

The Problem / Solution comparison is a core pattern across all product one-pagers. The amber pill header on the "Manual/Legacy" side and the teal pill on the product side are not interchangeable with any other color — they carry semantic meaning that is now established across the full product suite.

Amber pill header = the old way (problem). Teal pill header = the Halcyon way (solution). This color coding must be consistent across every product one-pager and any derivative collateral.

Product Suite

Naming, architecture & brand hierarchy

All Halcyon products use the "True" naming architecture. Product names are always presented as a single compound word with "True" capitalized and the second element capitalized. Products are never referred to by abbreviations, initialisms, or informal shorthand in client-facing materials.

TrueTax	IRS data access and tax document verification.
TrueCalc	AI-powered self-employed income calculation from tax returns or IRS data.
TrueMark	Real-time government ID verification for commercial document signers.
TrueYou	Consumer identity verification and synthetic identity fraud detection.
TrueOccupancy	Property occupancy verification and fraud prevention.
TrueReport	Reporting, documentation, and compliance output suite.

Product names always appear with the trademark symbol (™) on first reference in any collateral: TrueCalc™, TrueMark™, etc. The ® registered trademark symbol is used on the Halcyon® wordmark. Confirm trademark status with legal before publishing new materials.

Imagery & Background Assets

Photography, AI image guidance & background system

Background Watermark System

The Halcyon symbol mark is used as a large-scale ghosted watermark over the teal gradient background. The mark is rotated and scaled to bleed off the frame, with reduced opacity so the teal gradient remains the dominant visual. This system is used on presentation title slides, section dividers, and widescreen digital backgrounds.

The black logo version (dark symbol mark, dark wordmark) is approved for use on the teal gradient background — as seen in the background asset. The full-color gradient logo should not be placed directly over the teal gradient. Use white reversed or black/dark on teal.

Photography & Imagery Style

Subject matter	Authentic financial services contexts: underwriters, loan officers, commercial bankers. Precision and focus — no generic stock smiles.
Lighting	Clean, well-lit environments. Avoid dramatic cinematic lighting in standard collateral — reserve for brand awareness applications.
Color grading	Slight cool shift consistent with the teal palette. Avoid warm golden tones that conflict with teal dominance.
Quote block photos	Soft-focus or de-emphasized background imagery used under the blue-teal quote overlay. Faces acceptable if identity is not the focus.

Negative space	All hero and web images must preserve a text overlay zone — typically right 50–60% or left third kept clear of busy detail.
Resolution	300 DPI minimum for print. 72–96 DPI / @2x for web. JPEG at 85% quality for photography; PNG for logos and transparency.

AI Image Generation Standards

When commissioning AI-generated imagery, all prompts must specify lens feel, lighting setup, color palette with hex codes, compositional guidance, and explicit exclusions. Standing exclusions for all Halcyon AI prompts:

No bokeh bleed or lens flare in the negative space zone. No logos or embedded text unless specified. No generic stock-photography aesthetics. No oversaturated gradients that conflict with the teal palette. No composite human faces that read as stock portraiture. No warm golden tones as dominant color.

Print Production

File specs, bleeds, paper & finishing

Standard File Specifications

Color mode	CMYK for all print production files. RGB for screen and digital-only assets. The teal gradient will shift in CMYK — always proof against the approved CMYK values before production.
Resolution	300 DPI minimum at final output size for all raster elements. 600 DPI for fine line art and small type.
Bleed	0.125" (3mm) on all sides for trimmed pieces. Extend teal gradient and all background fills into the bleed zone.
Safe zone	Keep all critical content (logos, headlines, contact info) minimum 0.125" inside the trim edge.
Trim marks	Include crop marks and color bars for offset. Digital press: confirm specifications with vendor.
File format	PDF/X-1a or PDF/X-4 for offset. Press-quality PDF for digital. Embed all fonts; link all images at full resolution.
Black text	100K only for body text and fine elements. Rich black (C60 M40 Y40 K100) for large black fields only.
Teal gradient CMYK	Teal Green #0AB7A3 ≈ C85 M0 Y44 K0. Teal Blue #0498C6 ≈ C97 M25 Y0 K0. Always proof from a calibrated monitor before committing to a production run.

Approved Paper & Finishing

One-pagers / sell sheets	100lb gloss or silk text. The teal gradient reproduces most richly on coated stock.
Business cards	16pt C2S coated. Matte or soft-touch laminate preferred. Spot UV on the symbol mark is approved.
Presentation folders	14pt C2S with soft-touch matte laminate. Foil stamp on symbol mark recommended for premium applications.
Brochures	100lb gloss text for interior pages; 80lb cover for self-covers. Score all folds.
Large format / trade show	Fabric tension display, dye-sublimation for the teal gradient — avoids banding. Vinyl: 13oz scrim, 720 DPI minimum.

Digital Standards

Presentations, web & social

Presentations (PowerPoint / Google Slides)

Format	Widescreen 16:9 (13.33" × 7.5"). Never use 4:3.
Title slide	Teal gradient background with ghosted symbol mark watermark. White reversed logo top-right. White Century Gothic headline.
Content slides	White background. Navy or teal-green section headings. Body text in near-black.
Logo placement	Top-right on teal/dark slides (white reversed). Bottom-right on white content slides (full color). Min 0.5" from slide edge.

Accent color use	Amber for callout boxes, key data highlights, and "problem" framing only. Teal for "solution" framing and positive data points.
Font embedding	Embed Century Gothic when saving PPTX for distribution. Confirm on Mac — Century Gothic is present in Office but may require manual embed step.

Web & Digital

Logo on web	Minimum 120px wide. Full-color on white; white reversed on teal/dark headers. Alt text: "Halcyon Solutions — Decide with certainty."
Gradient on web	CSS: background: linear-gradient(90deg, #0AB7A3, #0498C6). Always left-to-right. Avoid vertical on horizontal layouts.
Hyperlinks	Link Teal (#0292BE), underlined. Hover: Teal Dark (#015E7A). Never amber for links.
Accessibility	WCAG AA required for all text. White on teal gradient: verify contrast at small body sizes. Dark navy on white: passes at all sizes.
Image formats	PNG for logos and transparency. WebP preferred for photography (with JPEG fallback). SVG for product icons.
Social media	Profile image: symbol mark centered on a teal gradient square. Cover/banner: teal gradient with white reversed full logo and tagline.

Brand Governance

Approvals, contacts & asset library

All new brand applications — including new collateral formats, partner co-brand materials, event signage, and any departure from these guidelines — require review and sign-off from Halcyon's marketing team before production or publication.

Website	www.halcyonsolutions.ai
General email	Info@halcyonsolutions.ai
Sales inquiries	sales@halcyonsolutions.ai
Phone	844-880-1040

All brand asset requests (logos, approved background files, product one-pager templates, and master slide decks) should be directed to the Halcyon marketing team. Do not create derivative assets, recolor the logo, or modify approved product one-pager layouts without prior approval.
